

PRESS RELEASE

ZELTWANGER to host exchange on the mobility of tomorrow

- ZELTWANGER and its partners will be showcasing solutions to the challenges of electromobility at its in-house exhibition
- Presentation of the “German Fuel Cell Cooperation” for the production of fuel cells
- Presentations and exhibition on the topics of batteries, fuel cells and e-motors

Tübingen (Germany), October 20, 2021 +++ Focusing on the theme “Innovation meets E-mobility”, the ZELTWANGER Group held its first Technology Day in the field of electromobility, the ZET Day - E-Mobility, on October 12, 2021. The event took place at one of the company’s locations in Dußlingen (near Tübingen) and featured a number of interesting presentations on the topics of batteries, fuel cells and e-motors. Alongside ZELTWANGER, a large number of partners were also able to present their products and solutions to visitors at a “marketplace”. ZELTWANGER’s focus was on the core technologies of leak testing, laser technology, thermal management and automation. The aim was to provide a platform for all the attendees to catch up on the latest trends as well as techniques in electromobility and to exchange ideas with the experts from ZELTWANGER.

Over ten specialist presentations gave visitors an insight into the challenges posed by the change in mobility and the forward-looking solutions that are likely to be used in the coming years. The mix of speakers from renowned industrial companies, research facilities and institutes was very well received by the guests. In particular, the presentation of the “German Fuel Cell Cooperation”, a joint venture between VON ARDENNE, Weil Technology and ZELTWANGER, was followed with great interest by the visitors. “With the German Fuel Cell Cooperation, we cover the entire process chain for the production of bipolar plates, through fuel cell stacks to fuel cell systems. The collaboration of the three companies means bundled know-how, comprehensive expertise along the entire value chain and closely coordinated interfaces for the customer. The partnership brings together experts from the fields of coating, laser technology, leak testing, assembly and automation. This cooperation enables us to manufacture the complete production technology for the fuel cells of the future in a cost-efficient, flexible and scalable manner,” said Dr. Rüdiger Brockmann, Managing Director Technology and Sales of the ZELTWANGER Group.

The event was framed by the ZET Day marketplace, where eight companies presented their solutions. The exhibitors were able to use their booths to support their presentations and provide expert information to interested parties. The exhibition focused on the key topics of efficiency, quality and safety in the development and production of batteries, fuel cells and e-motors.

“The strong interest in our event, with over 100 participants, showed that we are asking the right questions about the technological challenges posed by the mobility transition,” said Brockmann, summing up the event. “The feedback from our visitors was consistently positive and there was clear added value from the event, both for the guests and for us at ZELTWANGER. For one thing, we are delighted to have been a sought-after and good host. On the other hand, it shows that ZELTWANGER, with its portfolio and its technologies, is playing a decisive role in the transformation to electromobility.”

About the ZELTWANGER Group

Since it was founded in 1982, the ZELTWANGER Group has established a prominent position in the market. The Group's success has always been characterized by an irrepressible passion for technology. ZELTWANGER stands for skill, innovation, and technical solutions to the highest standard. In the fields of automation, leak testing, laser technology, and contract manufacturing, ZELTWANGER is now a technology and innovation leader. ZELTWANGER is setting standards with its solutions in a wide range of industries, including plant engineering, automotive, e-mobility, medical technology, automation technology, the packaging industry and plastics technology. Passion for technology – this is what drives over 450 employees at 5 locations worldwide.
